1 Introduction

This is a template for the [dissertate](#) capability.

Advisors and advisees collaborate on the html version of the thesis/dissertation, with graduate-school format available via pdf download (right side-bar).

1.1 Literature review

Citations are specified in [BibTeX](#) or [BibLaTeX](#) format and stored within `.bib` file(s) located within your project directory.

For example, see the work of Allaire et al. (2026) and Knuth (1984)

2 Methods

You use [markdown](#) to indicate formatting – the most important formatting elements for your thesis/dissertation are [headings](#). These will be most directly tied to the look of your graduate school formatted document.

You should also familiarize yourself with cross-references – they will help:

1. reader [navigation](#) of your paper
2. management of [tables and figures](#)

Regarding #1, see Section [4.1](#)

Regarding #2, if you properly cross-reference your tables and figures, you will NOT need to do any manual renumbering or sequencing if (when) your advisor asks for a sequence swap.

3 Results

Get as fancy as you'd like here (see Figure 3.1) although remember that the .pdf submitted to the graduate school will not reflect/support interactivity...

Appendices of your code-chunks can be auto-generated if you like, although the fact that you're completing your thesis/dissertation using `dissertate` somewhat mitigates the reasons for doing so.

3.1 Pretty Graph

```
```{r}
#| label: fig-bubble
#| fig-cap: "Bunch 'o bubbles"

library(plotly)

data <- read.csv("https://raw.githubusercontent.com/plotly/datasets/master/school_earnings.csv")

fig <- plot_ly(data, x = ~Women, y = ~Men, text = ~School, type = 'scatter', mode = 'markers',
 marker = list(size = ~Gap, opacity = 0.5))
fig <- fig %>% layout(title = 'Gender Gap in Earnings per University',
 xaxis = list(showgrid = FALSE),
 yaxis = list(showgrid = FALSE))

fig
```
```

Figure 3.1: Bunch 'o bubbles

4 Discussion

Important contributions, world-altering implications, yadda-yadda...

4.1 Meh

⚠ Warning

Be judicious with your use of [within-document cross-referencing](#). After all, was this section really worth it?
